Professional Summary

Entry-Level Data Analyst with hands-on experience in Python, SQL, Power BI, and Pandas for cleaning, analyzing, and visualizing large datasets. Built end-to-end analytics projects, including processing and reporting on 650K+ records to generate actionable business insights through dashboards and data-driven analysis. Strong foundation in exploratory data analysis, statistics, and problem-solving, with a focus on transforming raw data into informed business decisions.

Technical Skills

Programming Languages: Python, SQL (Joins, CTEs, Window Functions), JavaScript, R

Data Analysis & Processing: Pandas, NumPy, SciPy, Exploratory Data Analysis (EDA), Data Cleaning, Data Validation

Machine Learning: Scikit-learn, Predictive Modeling, Regression Models, Classification Models

Data Visualization & BI: Power BI, Tableau, Microsoft Excel, Matplotlib

Databases: MySQL, SQLite, MongoDB

Developer Tools: Git, GitHub, VS Code, Docker, Jupyter Notebook

Web Technologies: Flask, HTML, CSS, Vanilla JS

Experience

Data Analyst & Python Developer | Al Haseena Exports Pvt. Ltd.

Dec 2025 – Jan 2026

[LogiSense 360](#) – Predictive Logistics Analytics Platform

Python | Flask | Scikit-learn | SQLite | MongoDB

- Developed a predictive logistics analytics platform integrating machine learning models for **shipment spoilage prediction, delivery delay prediction, and profit forecasting**.
- Engineered predictive models using historical data to identify operational risks and support proactive business decision-making.
- Built interactive dashboards and reporting modules for admins, drivers, and customers to monitor shipment performance and operational KPIs.
- Automated shipment monitoring via intelligent alert generation, enabling early identification of exceptions and high-risk shipments.

Projects

V Connect: Large Scale Data Analytics Platform | Python, Pandas, Power BI, SQL

May 2025

- Analyzed and transformed **650,000+ village-level records** using Python and Pandas by cleaning, validating, and preparing data for large-scale analytical reporting.
- Performed **exploratory data analysis (EDA)** using SQL and Python to uncover demographic, infrastructure, and development trends that supported data-driven insights.
- Designed interactive **Power BI dashboards** with KPI tracking, drill-down analysis, and dynamic filtering to visualize village-level performance and regional comparisons.
- Reduced manual reporting effort by approximately 70% through automated data processing pipelines.

[CyberForge](#): Intelligent Knowledge Retrieval Platform | Python, Flask, SQLite, JavaScript

June 2026

- Developed an intelligent knowledge retrieval engine that processed user queries against a structured **150-response knowledge base** containing **500+ indexed keywords per knowledge entry**.
- Designed a custom **relevance-scoring algorithm** that ranked candidate responses based on keyword matching and returned the highest-scoring result in real time.
- Integrated multilingual voice and text interaction, and intelligent autocomplete to enhance user experience and accessibility.
- Built a modular Flask application with SQLite for efficient data management, fast response retrieval, and scalable deployment.

Education

Master of Computer Applications

Jul 2024 – Apr 2026

[Measi Institute of Information Technology](#)

Bachelor of Commerce

Aug 2021 – May 2024

[The New College](#)

Achievements

- 1st Place** — Intra-College Hackathon, MEASI Institute of Information Technology (2025)
- 2nd Place** — Inter-College Hackathon, MGR University – Department of Information Technology (2025)
- Solved 1,750+ coding problems** on LeetCode, strengthening algorithmic thinking and problem-solving skills.
